Application/Control Number: 10/618,057

Art Unit: 2835

#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-4, 9, 10, 12, 14, 15, 17, 19, 20, 21-32, 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kimura et al. in view of Jacoby.

Kimura discloses a heat sink having a base plate 10 made of thermally conductive material, a plurality of fins 3 formed on a surface of the base plate, at least one heat pipe 1 positioned in a heat pipe mounting portion such as hollow portion, portions in the vicinity of the heat pipe being crimped to join the heat pipe and the base plate (Fig. 5A-Fig. 6B); the heat pipe and fins are arranged in crossed directions; one end of the heat pipe is extended to be connected with another heat sink (see Fig. 11). Kimura discloses the claimed invention except fins being attached to the base plate by crimping. Jacoby discloses a heat sink having fins attached to the base plate by either slit or point crimping. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to attach fins as disclosed by Jacoby for the device disclosed by Kimura to provide efficient close pitch fins on the base plate. Kimura discloses the claimed invention except fan. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to have fan for sufficient cooling of fins as disclosed in prior art cited in US PTO Form 892 which is not applied at

Art Unit: 2835

this time. The prior art also shows the surface of the heat pipes being placed flush with the surface of the base plate or extending from that surface (see Chao, Prasher et al. and Shutou et al. references which are not applied at this time), therefore it also obvious. It would have been also obvious to one having ordinary skill in the art at the time the invention was made to use slit or point crimping methods since having the functional features of the claims which are limiting the method of manufacture, but do not provide the structure, which differentiates the final product from the product described in the prior art. The method steps of claims 19 and 20 are necessitated by the device structure as disclosed by Kimura et al in view of Jacoby.

## Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claim 18 is rejected under 35 U.S.C. 102(b) as being anticipated by Hood, III et al.

Hood discloses a heat sink 54 with fins comprising: a base plate made of a heat conductive material, a plurality of heat dissipating fins which are joined to one surface of said base plate; and at least one heat pipe 56 positioned in a heat-pipe mounting portion formed on the surface of said base plate to which said heat dissipating fins are joined.

Art Unit: 2835

## Allowable Subject Matter

5. Claims 5-8, 11,13, 16, 33, 35 are allowed.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Boris L. Chervinsky whose telephone number is 571-272-2039. The examiner can normally be reached on 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lynn D. Feild can be reached on 571-272-2800 ext. 35. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
